

CHARTER RADIOLOGY RADIOLOGY DONE RIGHT

WELCOME TO CHARTER RADIOLOGY

Charter Radiology was founded in 2014 by Arvinder “Daisy” Uppal, M.D., breaking through the impersonal style of old-school radiology centers to deliver a uniquely personal experience. Dr. Uppal had a vision – to combine the most individualized, compassionate care with the most sophisticated imaging technology available.

Charter Radiology operates under the premise that better imaging and state-of-the-art technology leads to a more accurate diagnosis, which results in optimal patient outcomes. Charter Radiology offers the most sophisticated technology, most of which is not available at many area academic hospitals and local imaging centers. This advanced equipment includes the Siemens Definition AS 128-slice low dose CT scanner and Siemens 3 Tesla Wide Bore scanners, which are the gold standard in imaging. Areas of focus at Charter Radiology include neuroradiology, orthopedics, cardiology, vascular, urologic, and women’s imaging, as well as radiologic research studies.

A Personal Approach Sets Charter Radiology Apart

Dedicated to personalizing the face of radiology to better serve patients’ needs, Dr. Uppal’s care philosophy is to treat every patient like family. “Radiology Done Right” is about more than just having the most sophisticated equipment, which is why all Charter team members are committed to making every patient encounter personal.

Precision in Radiology Readings

In addition to being widely known for its state-of-the-art imaging technology, Charter Radiology has earned a stellar reputation for its precision in all radiology readings and diagnoses. In fact, Charter Radiology’s unparalleled radiologic expertise is known throughout the region.

A Patient-Focused Practice Begins with its People

At Charter Radiology, we have only the most highly trained, accomplished, experienced technologists performing imaging. This leads to better images, more accurate interpretations, and better patient outcomes.

OUR MISSION

Charter Radiology provides compassionate care to every patient. We continuously invest in state-of-the-art technology that, together with expert interpretations, yields the best surgical and patient outcomes. Excellence is a choice that we embrace, revere, and pursue.
